PROFESSIONAL SUMMARY

Backend Software Engineer with 5+ years of experience building scalable applications, RESTful APIs and microservices, with hands-on experience in Java, TypeScript, Node.js, NestJS, SQL and NoSQL databases. Strong grounding in OOP, design patterns, data structures and concurrency. Experienced in database optimization, CI/CD automation (Docker, Kubernetes, GitHub Actions, Jenkins) and production monitoring on GCP and AWS. Track record of improving system performance, reducing infrastructure costs, mentoring developers and collaborating with cross-functional teams through code reviews and unit testing.

TECHNICAL SKILLS

Languages: Java, TypeScript, JavaScript, PHP, SQL, HTML, CSS

Backend & APIs: Node.js, NestJS, Express.js, RESTful APIs, GraphQL, Microservices

Databases: MongoDB, MySQL, PostgreSQL, ClickHouse, BigQuery, Redis (caching)

Cloud & DevOps: Google Cloud Platform (GCP), AWS, Docker, Kubernetes, CI/CD (GitHub Actions, Jenkins), Git, Postman

Monitoring: Grafana, PagerDuty

Architecture & Patterns: OOP, Design Patterns, System Design, Distributed Systems, Concurrency, Database Optimization

Engineering Practices: Unit Testing, Code Reviews, Data Structures & Algorithms (DSA)

PROFESSIONAL EXPERIENCE

Senior Software Developer

SaaS Labs Software Pvt Ltd, Noida, India | June 2021 – Present (5 years)

Backend Development, APIs & Architecture

- Led design and implementation of robust, scalable backend solutions for a complex microservices architecture serving multiple teams
- Spearheaded development of Developer API v2 using NestJS, TypeScript and MongoDB with enhanced authorization and rate limiting
- Designed and implemented a scalable backend framework improving system performance across 50+ microservices
- Refactored 10,000+ lines of legacy PHP code to a modern NestJS architecture, reducing system downtime by 30%
- Optimized SQL queries and restructured API design, reducing server response times by 40% and improving user satisfaction by 25%
- Integrated third-party CRM systems (HubSpot, Freshdesk, Zendesk) using REST APIs

Data, Analytics & Performance

- Built a unified analytics platform aggregating data from multiple microservices for real-time reporting
- Migrated API logs from MySQL to MongoDB, reducing infrastructure costs by \$300/month while improving scalability
- Developed an automated report scheduling system using cron jobs and MongoDB, ensuring timely delivery to 500+ users
- Enhanced API logging using BigQuery for advanced analytics and faster debugging

DevOps, Reliability & Code Quality

- Implemented CI/CD pipelines using GitHub Actions and Jenkins, enabling automated build and deployment workflows
- Containerized backend services using Docker for consistent development and production environments
- Engineered a real-time API monitoring dashboard using Grafana, reducing mean time to resolution by 20%
- Managed production incidents via PagerDuty, ensuring high system availability (99.9% uptime)
- Established unit testing and code review practices; provided detailed code reviews and architectural guidance to team members

PHP Developer Intern

ToXSL Technologies Pvt Ltd, Chandigarh, India | January 2021 – June 2021

- Designed and implemented scalable backend APIs improving system performance and reliability
- Developed UI components and implemented advanced search filters, enhancing user experience
- Identified and resolved 15+ critical bugs, reducing user-reported issues by 10%

EDUCATION

Bachelor of Engineering (B.E.), Computer Science — Rayat and Bahra University, 2021 | CGPA: 9.25

CERTIFICATIONS & CONTINUOUS LEARNING

- The NestJS Bootcamp: Complete Developer Guide (Udemy) – Advanced backend framework expertise

ACHIEVEMENTS

- 1st Place – SaaS Labs Hackathon: Led debugging and issue resolution for Emma Bot critical systems
- 1st Position – CGC Chandigarh Hackathon: Built a functional solution within a limited timeframe
- 2nd Place – Debugging Competition (10 teams): Chandigarh College of Engineering and Technology
